How to start the BabySensor

Quick Guide

01

Lad opp enhetene

Remember to remove the protective plastic located between the base station and the wristband sensor

02

Check that your phone is connected to Wi-Fi

BabySensor uses 2.4ghz networks. Most networks support both 2.4 Ghz and 5 Ghz. Some home networks have divided this into two separate networks

03

Download the app from AppStore or GooglePlay and follow the instructions to connect.

Base station, wristband sensor and phone must be physically close to each other during connection due to the use of Bluetooth for this purpose.

PS: Notification levels and settings can be easily changed in the app
See instructions for using the app
